

Direct mounted Alset LED Highbay

The **Alset LED Highbay** is an energy efficient, low maintenance fixture that provides safety, savings, and aesthetics to any indoor area. Specifically, in this case, a Florida college decided to test the fixtures in their gymnasium. They replaced the existing 1000 Watt Metal Halides with the 28,000 lumen, 4000K Alset Highbay. The photo to the upper left shows the significant increase in light provided to the gym area. The Alset fixtures are on the outside of the picture.

Indirect mounted Alset LED Highbay

The Alset highbays may also be installed as an indirect lighting fixture as shown in the photo to the lower left. Can you spot which fixture is using 234 watts and which is using 1058 watts? With options including occupancy sensors and wire guards, this fixture is the perfect solutions for gyms.
