

Lighting is an important safety factor in buildings where maintenance equipment is stored and serviced. In Belvidere Township, in northern Illinois, they took the only necessary step to ensure a productive and safe environment for maintenance staff: They installed **ALSET LED Highbay fixtures** in their warehouse, replacing their existing, inefficient LED fixtures.

Back warehouse section before ALSET upgrade

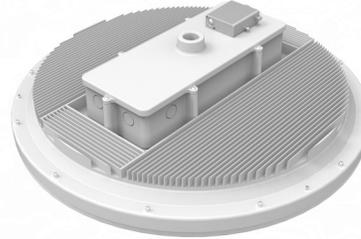

The results achieved by Belvidere Township are consistent with other projects where ALSET LED's have been installed to improve less-than-desirable lighting conditions. With planning assistance from our knowledgeable lighting experts, fixtures in strategic locations were replaced with ALSET LED 28,800 lumen, 5000k highbays, producing results that are both economical and dramatic.

This is the ALSET LED highbay that was used at the Belvidere warehouse:

Model # 52051 **Lumens** 28,800 **Color Temp** 5000k **Watts** 234.2 **Lumens per watt** 123

Wattage equivalent of a 750-1000 watt HID fixture.

The ALSET LED highbay is not just a pretty face. ALSET LED Lighting helped bring safety, savings and aesthetics to a space that is used every day by people who deserve only the best.
